D.	Purac® Hipure 90 (15% Solution) ²	Lactic Acid (and) Water	Corbion	q.s.
Total				100.00

Mixing Procedure

1. Add the Versene Na2 Crystals Chelating Agent to the deionized water of Phase A with moderate propeller agitation at 40-45°C. Mix until completely dissolved. Maintain the temperature at 40-45°C.
2. In a separate container, combine the Floraesters K-20W Jojoba, Glycerine 99.7% USP Kosher, Butylene Glycol, and fragrance of Phase B at 40-45°C with low to moderate propeller agitation. Make sure the Floraesters K-20W Jojoba is completely dissolved. Add Sepinov EMT 10 and continue mixing with low to moderate propeller agitation until the Phase becomes a uniform, low viscosity gel. Maintain the temperature at 40-45°C.
3. Add Phase A to Phase B very slowly with rapid propeller agitation at 40-45°C. Begin cooling to room temperature once the mixture becomes uniform.
4. Add Phase C to Phase AB, one ingredient at a time in the order listed, at room temperature with moderate to rapid propeller agitation. Make sure each ingredient is uniformly mixed in the solution before the next ingredient is added.
5. Add Phase D with moderate to rapid propeller agitation to achieve pH 5.5.

¹ Fragrance: Lemon Fresh S15-79629 [INCI: Fragrance] supplied by Premier Specialties, Inc.

² To prepare Purac Hipure 90 (15% Solution), combine the following ingredients at room temperature with moderate propeller agitation.

Ingredient	%wt./wt.
Purac Hipure 90	15.00
Deionized Water	85.00
TOTAL	100.00

Typical Properties: pH: 5 - 6
